Atlanta, Ga. – Richardson Technology Systems (www.RichardsonTSI.com) announces its winners of the "Classrooms of the Future" contest, which highlights the positive difference technology is making in the learning process. The contest recognized four fifth and sixth grade classes throughout Georgia whose teachers will receive technology to use during instruction.

Ms. Loria Crews' class at Five Forks Middle School was recognized as the winner with four submissions by students Sarah Burger, Lauren Jones, Tiffani Palamuso and Kiran Wasif. Runner-up classrooms included Ms. Kati Searcy's class at Mountain Park Elementary (entry by Mia Hall), Ms. Meghan Golding's class at Chrysalis Experiential Academy (submission by Henry Ballard), and Ms. Terri Thornton's Class at Auburn Elementary School (from William Warren-Aliff).

"Many of the teachers and students in Georgia use our learning tools every day," says Richardson TSI CEO Joseph Ciotti. "With 'Classrooms of the Future,' we wanted to show everyone how important technology is to the learning process."

With technology systems that help raise graduation rates and improve test scores, Richardson TSI has set out to help others understand the crucial function of technology in today's schools. Richardson will be providing LearningSoft's flagship wireless student response handheld platform, the Indigo Learning System, in the winning classroom and will showcase the chosen submissions on a traveling exhibit throughout Georgia. In addition, the three runner-up classrooms will receive honorary prizes of TeachLogic's Quantum system, an infrared wireless communication device ideal for classrooms.

About Richardson Technology Systems

For more than 40 years, Richardson Technology Systems has been providing education, healthcare, government, and select commercial facilities in the state of Georgia with integrated technology solutions. Richardson's solutions improve learning and enhance safety for schools, improve the way their customers communicate, and provide patient safety and operational efficiency for hospitals. From planning and design to implementation and service, Richardson works closely with their customers to provide integrated systems that meet their clients' needs. Their comprehensive solutions include intercom and telephone communication systems, data networks, fire alarms & security, and multimedia management and curriculum solutions for schools, as well as nurse communications, asset tracking, infant protection, and medical lighting. For more information, visit www.RichardsonTSI.com.

About Learning Soft

LearningSoft, a member of the Jacoby Group, produces affordable wireless computing platforms for education. Its flagship product, the Indigo Learning System, is a network of handheld computers developed specifically for assessment and instruction. Indigo provides instant feedback for educators to guide classroom decisions and ensures that students achieve success on "high-stakes" standardized exams. For more information, visit www.learningsoft.net.

About TeachLogic

TeachLogic, Inc. is a professional audio company specializing in infrared wireless audio products that offer interference free audio transmission in a wide variety of applications. Since its inception in 1992, TeachLogic has studied the benefits of sound amplification in the classroom and is a national provider of infrared wireless microphones, classroom amplification sound systems and other sound systems.
