### **Richardson Technology Systems Helps Georgia Schools Remain Compliant With The No Child Left Behind Act Using Their Innovative Technology Solutions**

*Test scores are rising with the effective use of technology*

**Suwanee, Ga.** - Since the No Child Left Behind Act was authorized nearly seven years ago, schools across America have struggled to comply with its demands. Teachers don't feel "technologically savvy" and many school districts don't have the funds to update their existing equipment. But now Richardson Technology Systems ([www.RichardsonTSI.com](http://www.RichardsonTSI.com)), an integrated technology solutions company, is helping Georgia schools overcome those hurdles with a full-spectrum of technology solutions and the resources to pay for it.

"The impact of technology in the classroom has proven to be dramatic," said Joseph Ciotti, CEO of Richardson Technology Systems. "By making learning more appealing, our customers have seen improved test scores and graduation rates."

Richardson Technology Systems also helps school districts locate grants and funding. Through its on-site grant division, the company assists customers in obtaining the financial support they need to purchase the systems they desire. To date, they have helped Georgia schools raise over \$10 million in federally funded grants and technology funding assistance programs such as the E-Rate Program. This funding provides discounts on approved telecommunication and Internet access expenses, along with the monies needed to upgrade existing technology.

**-more-**

Studies have shown that one of the best ways to increase learning levels and retention rates in students is to provide an interactive learning environment. Richardson Technology Systems has partnered with the industry leaders in the field of classroom technology to provide a solution that integrates audio, visual, and instructional multimedia tools to enhance the learning process. Using this technology, students, teachers and administrators can participate in a variety of applications such as distance learning, electronic field trips, teacher training and staff development.

#### About Richardson Technology Systems

For more than 40 years, Richardson Technology Systems has been providing education, healthcare, government and select commercial facilities in the state of Georgia with integrated technology solutions. Their solutions improve learning and enhance safety for schools, improve the way customers communicate, and provide patient safety and operational efficiency for hospitals. Comprehensive solutions include intercom and telephone communication systems, data networks, fire alarm & security, professional sound systems, multimedia management and curriculum solutions for schools, as well as nurse communications, asset tracking, staff scheduling, infant protection, medical lighting, and headwall units for healthcare facilities.
